

"Hello Everyone!"

list slicing

[], append

$a = [4, 10, 20, 5, 7, 10]$

List slicing

① Access an elem single

$a[3]$ → 5
 index-no

* Accessing a range of elements.

List Slicing

$\text{range}(a, b)$
 $0, 5$

$a[a:b]$
 (start) index included → excluded (end) index

$a[0:5]$

return a list which have
all the elems of list a
from 0 to 4 index

Imp:- Original list does NOT gets updated
but a new list is created and
returned.

`|0:3|` sharp

Doubt

range(`3`, `5`, `6`)

```
i = 3  
while i < 5:  
    print(i)  
    i += 1
```

* Negative slicing :-

$a[-3:-1]$

step size $\rightarrow +1$

1

-3

$b[1:-3:1]$

Imp

indices

position

direction
